

Uncontacted Tribes of the World

Reading Worksheet — Level F | tahricteaches.com

In an era when satellite internet reaches the most remote corners of the planet, it is remarkable that entire communities remain completely outside global contact — not through isolation imposed on them, but by deliberate choice. A landmark 2025 report from Survival International, the first comprehensive global survey of its kind, documented 196 uncontacted indigenous groups living across ten countries, concentrated mainly in the Amazon basin of South America, with additional groups in South Asia and the Pacific.

Perhaps the most studied case is the Sentinelese of North Sentinel Island in India's Andaman archipelago, whose population — estimated anywhere between 50 and 200 — has maintained near-total **sovereignty** over contact for generations. India enforces a strict exclusion buffer around the island, a rare instance of a modern state formally protecting a community's right to **autonomy** from the rest of the world. When an American visitor illegally landed on the island in 2018 attempting to make contact, he was killed — an outcome that reignited international debate over whether any contact, however well-intentioned, can ever be ethically justified.

The greatest concentration of uncontacted peoples is found in Brazil's Javari Valley, a territory straddling the Brazil-Peru border where FUNAI, Brazil's federal indigenous affairs agency, has confirmed at least nine distinct uncontacted groups. Among the Amazon's most **vulnerable** communities are the Piripkura, reduced to just two known living men, and the Kawahiva, a group of fewer than 100 people who survive by constantly fleeing advancing loggers. In 2022, the so-called "Man of the Hole," the last known survivor of his people in the state of Rondônia, died alone after living in near-total solitude for over two decades — a stark illustration of what **displacement** and **exploitation** can ultimately cost.

Historically, many groups retreated into isolation to escape the violence of colonization and, later, the Amazon rubber boom, during which entire populations were enslaved or killed. That legacy of trauma explains much of today's avoidance of contact. Epidemiologically, the risk remains severe: because uncontacted peoples lack **immunity** to introduced pathogens, a single outbreak of measles or influenza can kill up to half of a group within a year of contact, making disease — not direct violence — historically the deadliest consequence of encounters with the outside world.

Illegal logging, mining, and agricultural **encroachment** continue to shrink the territories these communities depend on. In response, organizations such as FUNAI and Survival International pursue a strategy of **advocacy**: lobbying governments to **demarcate** and legally defend indigenous land, rather than attempting contact. Their position — that the right not to be contacted is itself a form of self-determination — has reframed how many anthropologists and policymakers now think about these communities' place in a connected world.

A. Vocabulary

1. sovereignty ____	a. a group's right to decide its own political status and future
2. autonomy ____	b. the gradual intrusion onto land or rights that belong to others
3. vulnerable ____	c. public support for or recommendation of a particular cause or policy
4. displacement ____	d. to officially mark out the boundaries or limits of an area
5. exploitation ____	e. the forced removal of people from their home or land

6. immunity ____ f. the body's biological ability to resist a particular infection or disease

7. encroachment ____ g. the authority of a group to govern itself and make its own decisions

8. advocacy ____ h. the right or condition of self-governance; independence

9. demarcate ____ i. at high risk of being harmed physically, socially, or emotionally

10. self-determination ____ j. the unfair use of someone or something for personal benefit

B. True or False

__ 1. The 2025 Survival International report found 196 uncontacted groups across ten countries.

___ 2. Most uncontacted groups today live in Africa.

__ 3. India enforces an exclusion buffer around North Sentinel Island to protect the Sentinelese's autonomy.

__ 4. The American visitor in 2018 successfully made peaceful contact with the Sentinelese.

___ 5. The Javari Valley is located entirely within Peru.

___ 6. The Piripkura are reduced to just two known living men.

__ 7. The "Man of the Hole" died in 2022 after living alone for over two decades.

__ 8. Uncontacted peoples generally have strong immunity to diseases like measles and influenza.

__ 9. Illegal logging and mining are among the main threats to uncontacted peoples' territory.

__ 10. FUNAI and Survival International primarily try to establish direct contact with uncontacted groups.

C. Fill in the Blanks

Word Bank: sovereignty, encroachment, vulnerable, displacement, exploitation, immunity, demarcate, advocacy

1. India's exclusion zone protects the Sentinelese's _____ over whether to allow contact.

2. Because they lack _____ to introduced diseases, uncontacted peoples face extreme health risks after contact.

3. The Piripkura and Kawahiva are among the Amazon's most _____ uncontacted communities.

4. Agricultural _____ continues to shrink the forest territories uncontacted groups depend on.

5. FUNAI and Survival International focus on _____ work — lobbying governments to legally protect indigenous land.

D. Comprehension Questions

1. What does the 2025 Survival International report reveal about the global scale and distribution of uncontacted peoples?
2. How does India's policy toward the Sentinelese reflect a broader principle of indigenous autonomy?
3. Explain why disease has historically been deadlier to uncontacted peoples than direct violence.
4. What strategy do organizations like FUNAI and Survival International pursue instead of attempting contact, and why?

E. Discussion Questions

1. Is a government's duty to protect an uncontacted community's isolation ever in tension with other human rights or economic interests? Explain your reasoning.
2. Given the historical trauma that caused many groups to retreat into isolation, what obligations, if any, does the modern world owe them?
3. The 2018 incident on North Sentinel Island reignited debate about whether contact can ever be ethically justified. Where do you stand, and why?

Answer Key

Uncontacted Tribes of the World

Teacher Reference Only | tahricteaches.com

A. Vocabulary: 1-g, 2-h, 3-i, 4-e, 5-j, 6-f, 7-b, 8-c, 9-d, 10-a

B. True/False: 1-T, 2-F, 3-T, 4-F, 5-F, 6-T, 7-T, 8-F, 9-T, 10-F

C. Fill Blanks: 1-sovereignty, 2-immunity, 3-vulnerable, 4-encroachment, 5-advocacy

D. Comprehension:

1. It found at least 196 uncontacted groups across ten countries, concentrated mainly in the Amazon basin with additional groups in South Asia and the Pacific.
2. By legally enforcing an exclusion buffer around their island, India formally protects the Sentinelese's right to decide whether to have any contact with outsiders.
3. Because uncontacted peoples lack immunity to introduced diseases, outbreaks like measles or influenza can kill up to half of a group within a year, more than most violent encounters.
4. They pursue advocacy and land demarcation — legally defending indigenous territory — because they view the right not to be contacted as a form of self-determination.
